

Estifanos Bereket

Addis Ababa, Ethiopia | estifanosbereket297@gmail.com | github.com/estifanosbereket1

SUMMARY

I design and build reliable backend and mobile systems using **React Native**, **Flutter**, **React**, **Next.js**, **TypeScript**, **Node.js**, and **NestJS**. My work focuses on writing clean, scalable code and improving performance. I've handled everything from feature development to deployment and enjoy working with designers and product teams to turn ideas into practical, high-quality products. I'm looking for a role where I can keep growing technically and contribute to building tools that make a real impact.

TECHNICAL SKILLS

Frameworks: NestJS, Express, Nodejs, React Native, React, Nextjs, FastApi, Flutter

Database: PostgreSQL, MongoDB, Redis

Languages: Typescript, Python

WORK EXPERIENCE

Full-Stack Engineer | Mobile App Developer | Buna Labs (Nova Tech before) | June 2023 – Present

- Developed two niche-specific ERP solutions from scratch, comprising **over 15 core modules**, using **Nestjs** establishing a clean, reusable, and maintainable setup for complex business logic and contributed to the development of a custom authentication and role based permission system, handling large scale and flexible logic to provide secure data management and accessibility.
- Developed an ERP Mobile Application, **Nexa Tracker** using **Flutter**, which has more than 15,000 downloads over playstore and app store solving real world pain and problems of trade and manufacturing companies.
- Led the design and development of mobile applications with **React Native and Expo** supporting Nova tech's ERP ecosystem, ensuring seamless integration with complex backend services.
- Architected cross-platform app **Vita Board** (Flutter, Supabase, Edge Functions) to enable realtime features like community challenges, finance, task tracking, and leaderboards; established code standards, and mentored the mobile team.
- Built the admin system for **Bete Nebab**, an Amharic-focused English-learning app with **5,000+ active users** — developed scalable backend (NestJS) and mobile (Flutter) features with a reusable architecture; integrated **Tele-Cloud** for asset storage and **Carthesia AI** for automated text-to-speech to produce high-quality audio lessons and streamline content publishing
- Implemented real-time notifications, authentication, and payment flows (Chapa + local banks: CBE, Awash, Abyssinia), added bug-tracking, triaged and resolved critical issues to improve app stability and user experience.

Full-Stack Engineer | Mobile App Developer | Freelance | February 2026 – Present

- Developed Aimvoice, a full-stack payment and invoice management software leveraging React Native, NestJS, and NextJS, integrating Gemini AI and object storage to automate verification and secure document handling.

Projects

EthioExchnage App - Personal Project

Built **Ethio Exchange**, a realtime currency-rate app that aggregates live exchange rates from multiple Ethiopian banks after the government moved to a floating currency system. I implemented a resilient web-scraper plus a scheduled job that polls source sites constantly, normalizes and validates incoming rates, persists them, and exposes a low-latency API so clients always see the latest values

Afromessage Typescript SDK - Personal Project

Developed an open-source TypeScript SDK for **AfroMessage** to streamline SMS and OTP integrations — it abstracts complex API interactions into a modular client, provides granular error handling for authentication and rate-limiting, and includes configurable retry logic; this reduced boilerplate for local developers, improved type safety, and lowered the barrier for integrating Ethiopian communication services.
